INTRODUCTION

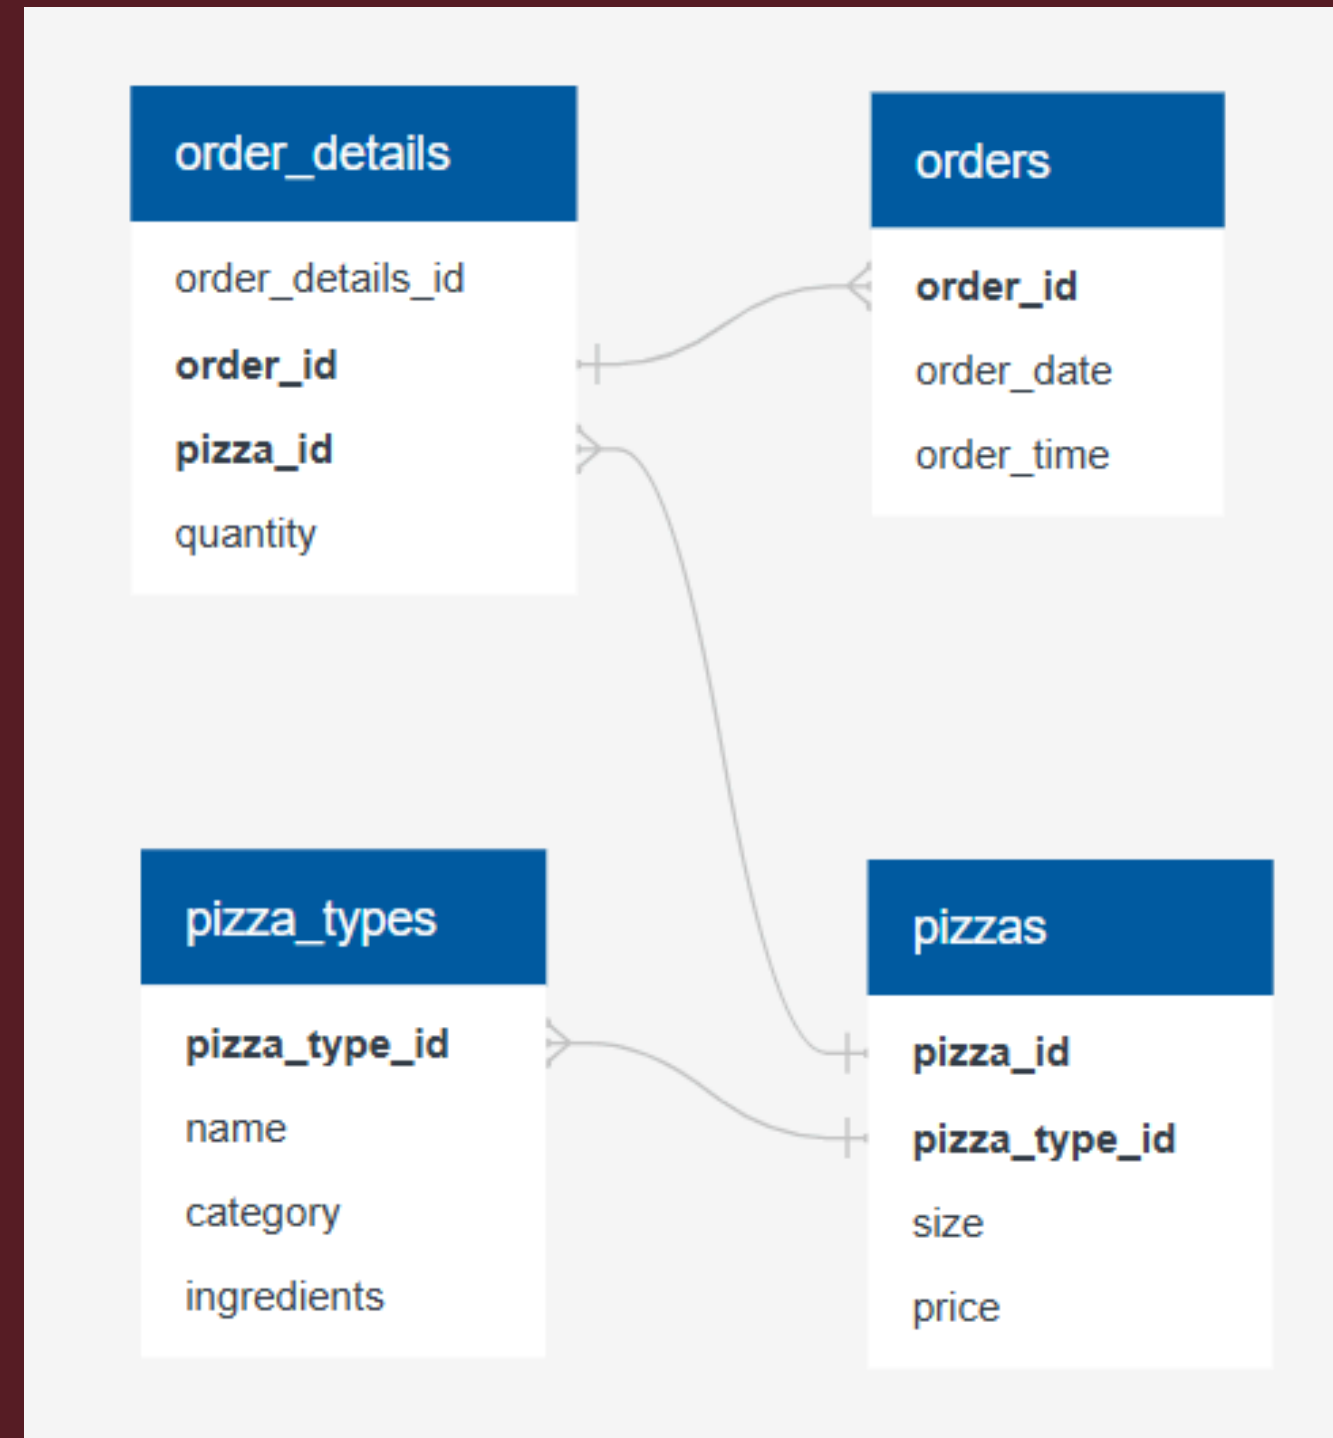

Hello, my name is Chirag Modha, an aspiring data analyst and in this project I've used SQL queries to solve questions related to pizza sales.

The dataset was provided by Ms. Ayushi Jain on Github.

Database Link - <https://github.com/Ayushi0214/pizza-sales---SQL>

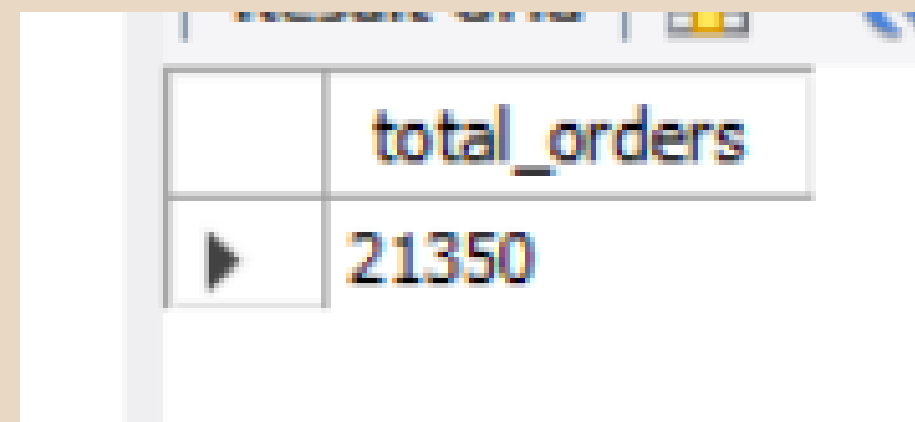

The project analyzes a pizza sales dataset using SQL to answer key business questions. The primary focus is on determining total sales, identifying the most ordered pizza, analyzing pizza sales by hour and such questions. This type of analysis helps in understanding customer preferences, peak sales times, and overall business performance, offering insights that could improve decision-making and optimize operations for a pizza business.
